

# Year 1 & 2 Science Week

## 'Digging For Dinosaurs!'

We had a very busy and enjoyable week in the Year 1 and 2, learning all about dinosaurs.

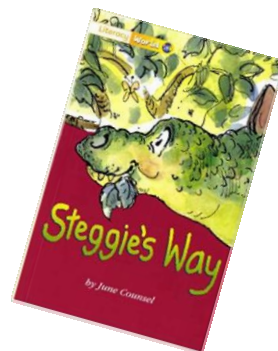

Our week began by becoming palaeontologists. Palaeontologists are scientists who work very hard to find out more about dinosaurs. We used special brushes to search through sand to find and identify different dinosaur fossils.

We enjoyed finding out about Mary Anning who was one of Britain's very first Palaeontologists. We even made some fossils of our own!

We read a great book called 'Steggie's Way'; the story was all about a class of children who had to look after a real Stegosaurus. We researched the stegosaurus and found out what they liked to eat and where they would choose to live, just in case we ever had to look after one too!

We even found our own dinosaur egg and hatched our very own class dinosaur. We were very excited when it hatched, even though it was very tiny!

We've all really enjoyed becoming dinosaur experts!
